

ENERGY MANAGEMENT POLICY

For the sustainable development of **INTERNATIONAL PAPER MADRID MILL**, it is essential to take into account energy factors when managing all our processes. The **PRODUCTION OF 100% RECYCLED CARDBOARD PAPER** is based on the efficient use of energy.

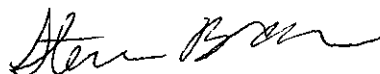

To this end, the Organization has decided to implement an Energy Management System in accordance with **UNE-EN-ISO 50001: 2011**.

The Management of **INTERNATIONAL PAPER MADRID MILL** document their commitment in:

- The search for energy efficiency opportunities through the evaluation of the impact of energy factors on process management.
- Measuring and monitoring consumption indicators, essential to assess impact and seek improvement in energy management.
- Complying with relevant environmental legislation and regulations on energy matters, and with other requirements undersigned by the organization.
- Continual improvement in process management taking into consideration the improvement of energy efficiency.
- Setting energy goals and objectives, as well as providing the necessary resources to achieve them.
- When tackling new investments and modernization or reconstruction projects, prioritizing methods, processes and products that may allow for a more efficient use of energy.
- Providing the necessary resources, so that efficient use of energy will be present at all levels and in every activity.

All **INTERNATIONAL PAPER MADRID MILL** personnel are responsible for using energy efficiently and must be aware of their use in order to lessen its impact.

This energy policy has been conveyed to everyone working in **INTERNATIONAL PAPER MADRID MILL** or on its behalf, and it is available to all stakeholders.

STEVEN P.BRAUN

Madrid Mill Manager
