

CPS Cost Savings Value Creation

In order to consistently drive and deliver practical innovation, International Paper has developed a defined process called our Cost Savings Value Creation or CSVC.

Package Optimization

Reduce package cost by delivering the most effective specification and creative design for your application, improved handling processes, enhanced fiber utilization and packaging compression.

Line Efficiency

Increase productivity and lower production costs with proper packaging automation, smarter palletization and package compression.

Warehouse Optimization

Better handling methods help reduce product damages. Smarter palletization reduces storage space and allows better usage of “free space”.

Supply Chain Efficiency

Reduce freight cost and product damage through enhanced trailer and container utilization, and by optimizing and improving logistics and interim storage practices. Optimum designs lead to improved customer satisfaction thanks to end-use consumer needs analysis.

CSVC Audits or Observation Visits

International Paper CSVC audits or observations utilize a cross functional team of key IP stakeholders working collaboratively with our customers at their facilities. Usually a full day, CSVC audits begin at incoming cartons through the process to finished goods.
