

CPSconnex

The CPS team at International Paper utilizes a suite of design and design management tools offered by Arden Software called CPSconnex.

What we do

Our Spec Management and Task Management capabilities start with our Impact CAD software. Designs are generated using a streamlined and fully interactive set of drawing tools.

Database

At the heart of CPSconnex is the Impact database which is unique to the packaging industry. All designs and version histories are stored in a highly configured database. This allows our team to share designs provides high-level automation and integration.

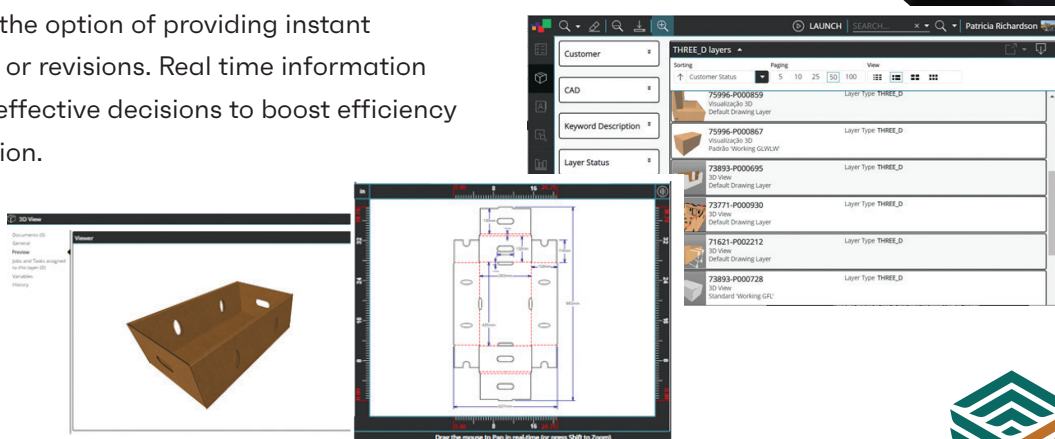

Enterprise

Arden's Enterprise Database Services allows IP designers to collaborate with team members all over the world. Enterprise reduces duplication efforts and adds search functions using broad criteria.

CPSconnex

This web design portal allows internal and external customers to view their most updated CAD design. Users can download specs or access stored documents 24/7 via the web, bridging the gap between Sales, Manufacturing and Design.

IP's customers can use CPSconnex to improve their speed to market, giving them the option of providing instant feedback for approvals or revisions. Real time information enables users to make effective decisions to boost efficiency and customer satisfaction.
